

## CASE STUDY

# EFI TIMEKEEPING ELIMINATES BURDEN OF MANUAL DATA TRACKING & INCREASES EFFICIENCY

Since 2020, a New-York based health system has been a valued managed services partner to Medical Solutions. When this health system needed help with streamlining timekeeping processes and increasing efficiency to focus more on customer experience, Medical Solutions immediately began creating a solution.

# THE CHALLENGE

Client invests hours each Monday to gather timekeeping information on contingent staff, leading to an administrative burden.

**2-3 HOURS**

Average time spent every week gathering timesheet details

**\*\*\*\*\***

Created a heavy amount of administrative burden for leaders

**EFI**

ELECTRONIC FILE INTERFACE

Introduced an EFI timekeeping system to capture all timesheet info

Every Monday, hospital leadership **spent an average of 2-3 hours every week gathering timesheet details** for contingent staff and submitting the information. This **created a heavy amount of administrative burden for leaders**, preventing them from allocating their expertise toward other responsibilities needed to help ensure the facilities were running smoothly and patients were receiving the highest level of care.

To help streamline processes and optimize time, Medical Solutions **introduced the health system's leaders to an Electronic File Interface timekeeping system** to capture all timesheet information.

# THE SOLUTION

Medical Solutions introduced the client to an Electronic File Interface (EFI) timekeeping system to capture all timesheet information—eliminating the burden of manual data input and reducing the risk of errors or discrepancies.

## ELIMINATE BURDEN

Eliminates the burden of manual data input

## REDUCE RISKS

Reduces the risk of errors or discrepancies

## SINGLE SOURCE

Work with one source for time verification

Rather than collecting timesheet details and submitting them to payroll, EFI allows clinicians to enter their own time into the facility's timekeeping system. The information is then shared with Medical Solutions using an Application Programming Interface.

By integrating EFI, the client **eliminates the burden of manual data** input and **reduces the risk of errors or discrepancies** since it's automated. Not to mention, EFI doesn't require any additional training for staff, and clients only need to work with **one source for time verification**.

# THE RESULTS

By implementing EFI, the health system saved 4 weeks of time annually, leading to increased efficiency, payroll accuracy, and overall production.

After identifying time savings and increasing efficiency through EFI to the client, hospital leaders approved the plan of action and Medical Solutions' Professional Services & Implementation team immediately began setting up the EFI process.

With the implementation of EFI, the client now **saves an average of 2.6 hours every week per 100 clinicians** which equates to an **average savings of 4 weeks of time annually**. This additional time back has **allowed the client to increase efficiency, payroll accuracy, and overall production**, as well as **the patient/staff experience**. Through understanding the client's time frustrations and simplifying their daily load, Medical Solutions has positively enhanced their partnership further with this health system.

## 4 WEEKS ANNUALLY

Saves an average of 2.6 hours every week per 100 clinicians or saves an average of 4 weeks of time annually

## INCREASED EFFICIENCY

Additional time back has allowed the client to increase efficiency, payroll accuracy, and overall production

## IMPROVED EXPERIENCE

Additional time back has also increased the patient/staff experience

## ABOUT US

Medical Solutions is one of the nation's largest healthcare talent ecosystems. Nationwide, we specialize in placing quality nurses, allied healthcare professionals, interim clinical leaders, and international clinicians in contingent as well as permanent, local, and PRN positions for hospitals, clinics, and long-term care

facilities. Our workforce solutions also include a managed services program, which offers a streamlined approach to contingent workforce processes, helping facilities gain efficiencies, control labor costs, and enhance patient care standards by finding the right people at the right time.
